WEEK 5 ASSIGNMENT

JavaScript Project Week

Duration: 1 Week (7 Days) | Marks: 100 | Submission: Choose One Option

■ Objective

The objective of this assignment is to apply the JavaScript concepts learned in Weeks 3 and 4 to develop a complete, functional, and interactive web application. Students will combine JavaScript fundamentals, functions, arrays, objects, DOM manipulation, and events to build a practical JavaScript project.

■ Instructions

• Complete the project individually.
• Use HTML, CSS, and JavaScript.
• Apply concepts learned in previous weeks.
• The project must be functional and interactive.
• Write clean and properly structured code.
• Test all major features before submission.
• Provide proper documentation of your project.
• Submit using any ONE of the three submission options below.

Task 1: Project Planning (10 Marks)

Choose ONE JavaScript-based project. Examples: To-Do List, Quiz Application, Expense Tracker, Student Management System, Notes Application, Calculator, Product Management System, or Task Management Application.

Include: Project Title; Project Objective; Target Users; Main Features; Technologies Used; and a brief description of the project.

Task 2: HTML & CSS Structure (15 Marks)

Create the basic structure and design of your project. Include proper HTML structure, a header/navigation, main content section, forms/input fields where required, buttons, cards or content sections, CSS styling, and a proper layout.

Task 3: JavaScript Functionality (25 Marks)

Implement the main functionality using appropriate concepts such as variables, functions, arrays, objects, conditional statements, loops, and array methods. The JavaScript functionality should be relevant to your selected project.

Task 4: DOM Manipulation & Events (20 Marks)

Make your project interactive using DOM manipulation and events. Implement selecting HTML elements, updating content dynamically, creating/removing elements, button-click events, form events, input events, and dynamic user interaction.

Task 5: Project Features (15 Marks)

Implement at least THREE meaningful features. Examples include add/delete items, search or filter, form validation, edit/update data, score calculation, category filtering, a dynamic counter, sorting, or interactive buttons.

Task 6: Project Documentation & Reflection (15 Marks)

Prepare documentation covering: Project Overview; Features Implemented; Technologies Used; JavaScript Concepts Used; Screenshots of the Project; Challenges Faced; Solutions Implemented; What You Learned; and

Future Improvements.

Word Limit: 300–400 words.

Submission Guidelines

Option	Requirements
1. Direct PDF	Submit a PDF containing project documentation, screenshots, code/output details, and required information.
2. Google Drive Link	Upload the complete project/documentation to Google Drive and submit a shareable link. Set access to **Anyone with the link can view**.
3. GitHub Repository Link	Upload the project to a GitHub repository containing HTML files, CSS files, JavaScript files, README.md, and project screenshots (if applicable).

Important: Any ONE submission option is mandatory. Students do not need to submit all three options.

Evaluation Criteria (100 Marks)

Task	Marks
Task 1 – Project Planning	10
Task 2 – HTML & CSS Structure	15
Task 3 – JavaScript Functionality	25
Task 4 – DOM Manipulation & Events	20
Task 5 – Project Features	15
Task 6 – Project Documentation & Reflection	15
Total	**100**
